To whom it may concern

I have a degree in mechanical and manufacturing engineering, as well as a master's degree in Structural Engineering (With distinction). My Structural Engineering education has exposed me to the theoretical knowledge required in this industry, such as design to Eurocodes as well as exposure to some design and analysis software (Ansys, Sap2000 & Etabs). I look forward to adding to this knowledge, whilst gaining valuable practical experience.

I have experience of running a large testing facility for a manufacturing company, which has allowed me to gain several transferable skills that I believe will be useful in this role. One of the biggest skills that I gained from this role was the ability to plan, manage and successfully deliver on projects without needing constant supervision or input. I have learned to solve problems both independently and as part of a team.

I have a positive and hands-on approach to working, I am always willing to learn and improve on my skills. I have shown my ability to learn effectively and quickly, in my previous role, where I took over the running of the testing facility after 4 months of assisting the senior test engineer. This experience has allowed me to realise that I am capable of learning and making myself useful in complex and technical subjects quickly and accurately.

Based on the skills and knowledge I already possess, and my willingness to constantly learn, I believe I will be a good fit for this role. I welcome a meeting to further discuss your needs and my ability to meet them.

Yours faithfully

Abdirahman Abdulle
